SUMMARY

Full Stack Developer with 2+ years of experience shipping production products in TypeScript — React / Next.js, Node.js / NestJS, PostgreSQL, Redis / BullMQ and Dockerized AWS, plus React Native with Kotlin native modules. Built a database-per-tenant AI interview platform live with **70+** study-abroad agencies and a public REST API of **62** endpoints; also founded Clinic Cloud, a multi-tenant healthcare SaaS launching soon.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Kotlin, SQL

Frontend & Mobile: React, Next.js, Redux Toolkit (RTK Query), Zod, Formik, React Native, Offline-first SQLite, Firebase (FCM)

Backend & Data: Node.js, NestJS, Express.js, FastAPI, REST APIs, Socket.IO, PostgreSQL, Prisma, MySQL, MongoDB, Redis, BullMQ, JWT + RBAC

AI: LLMs (OpenAI, Gemini), RAG, Embeddings, pgvector, Pinecone, LangChain, STT (Deepgram, Whisper), TTS (ElevenLabs), Azure OCR

Cloud & Tools: AWS (EC2, S3, CloudFront), Docker, Nginx, GitHub Actions CI/CD, Jest, Postman, Swagger, Git, Android Studio, Xcode, Google Play Console, App Store Connect

Integrations: Razorpay, Stripe, PayPal, WhatsApp Cloud API, ABDM / ABHA, Google Maps SDK

EXPERIENCE

Edysor.ai — Full Stack Engineer **Oct 2025 – Present**

Udaipur · Backend, web and mobile apps for edtech, voice-AI and recruitment products

Interview AI — voice-interview SaaS for study-abroad agencies — *NestJS, FastAPI, Prisma, Redis / BullMQ, OpenAI, Pinecone, Next.js*

- Designed a database-per-tenant architecture: creating an agency runs a job that creates its PostgreSQL DB, runs migrations, seeds a super-admin and registers the DB in a master DB; AsyncLocalStorage + an LRU connection pool route each request — **70+** agencies, **350+** students.
- Built the voice-interview pipeline (STT → LLM evaluation → TTS) on idempotent, retryable BullMQ workers that score each answer and email the student a PDF report; **500+** interviews completed.
- Added per-tenant RAG (pgvector + Pinecone) over question banks and a FastAPI service that builds follow-up interviews from weak answers.
- Built the Next.js admin dashboards, onboarding and reporting UI, Azure OCR for ID checks, and a WhatsApp assistant (Meta Cloud API + LangChain) that answers students and books slots.

Sicada AI — public voice-AI API — *Node.js, TypeScript, OpenAPI*

- Designed and built a public REST API of **62** endpoints in 7 groups — agents, campaigns, scheduled calls, RAG knowledge bases (URL / file), phone numbers, webhook and client tools, transcripts, billing — **10+** client companies use it to connect their software to Sicada.
- Built per-request API-key auth, one response envelope with pagination and LLM / STT / TTS provider discovery to DPDP rules, and wrote the public reference (sicada.ai/docs/api-reference).

CRM — lead-management app for a study-abroad team (B2B and B2C) — *React Native, Kotlin, WebSocket, LiveKit, SQLite*

- Built a Kotlin call engine (Broadcast Receivers + foreground service) capturing every call log and recording — **10,000+** logs, **8,000+** recordings.
- Built a Truecaller-style overlay that identifies the lead during a call, click-to-call triggered from the web CRM over WebSocket, and AI-to-human call transfer to a team member's app via LiveKit.

GORec — AI recruitment app, live on Google Play — *React Native, WebSocket, RTK Query, Deepgram*

- Built a streaming AI chat over WebSocket (auto-reconnect, token auth) with live job and candidate cards, plus Deepgram voice search.

WebSenor Private Limited — React Native + Node.js Developer **Sep 2024 – Oct 2025**

Udaipur · Product and client apps, including a May–Oct 2025 client assignment at MetaStart

- **EL-Pico (club booking):** built the Node.js booking backend with live availability and checkout-time slot locking, so no slot is double-booked.
- **Supraa (grocery delivery):** built live delivery tracking — background location from the partner app, pushed to customers over Socket.IO.
- **BigValue (travel):** built the flight-booking backend on the Thomalex and Riya APIs (live search, fares, seats) and the multi-city booking flow.
- **MyFlama (social, 100K+ downloads):** built the reels-style video feed for mid-range phones, plus real-time chat and push notifications.
- **Housecaller (home services, 10K+ downloads):** built the customer app — service discovery, scheduling and booking tracking.
- **Maintenance:** BRPL and BYPL, Delhi power-utility apps with **1M+** and **500K+** downloads, and Peclick Agency — fixes, SDK upgrades, releases.

PROJECTS

Clinic Cloud (GoClinic) — multi-tenant healthcare SaaS — Founder & Full Stack Lead · launching soon · goclinic.online **2025 – Present**

NestJS, FastAPI, Prisma, PostgreSQL, Redis, Next.js, AWS

- Founded it and led a 3-person founding team (backend, frontend, AI) — planning and assigning the work while building across the full stack.
- Architected a multi-tenant SaaS of **27+** modules on one NestJS deployment — header-based tenant isolation, JWT + OTP auth, fine-grained RBAC and subscription feature gating, on a Prisma schema of **80+** models.
- Integrated India's ABDM / ABHA health-record network end to end: ABHA creation, scan-and-share consent flows and server-to-server callbacks.
- Built real-time booking (Socket.IO), a multi-language WhatsApp bot for bookings, reminders and payment links on BullMQ, and a FastAPI agent that books appointments from text or voice notes.
- Shipped Razorpay billing (webhooks, invoice PDFs to S3) and Dockerized GitHub Actions CI/CD to AWS EC2 with zero-downtime migrations.

EDUCATION

Master of Computer Applications (MCA) — Rajasthan Technical University, Kota (distance) **2024 – 2026**

Bachelor of Computer Applications (BCA) — Mohanlal Sukhadia University, Udaipur **2021 – 2024**
