PROFESSIONAL SUMMARY

Full-Stack Mobile and Backend Engineer with **2+ years of experience** who has built and maintained **10+ production apps** with **1.5M+ combined downloads** on the Google Play Store and Apple App Store. Expertise in cross-platform React Native development with custom Kotlin native modules, React / Next.js web frontends, and architecting multi-tenant SaaS backends (NestJS, PostgreSQL, Prisma, Redis, AWS) with end-to-end AI/voice pipelines (OpenAI, Deepgram, ElevenLabs, Pinecone RAG).

Independently designed, built, and operate **Clinic Cloud**, a live multi-tenant healthcare SaaS integrated with India's **ABDM/ABHA** national health-record system. Strong focus on real-time systems, offline-first architecture, and public API design. MCA Graduate (2026).

TECHNICAL SKILLS

Mobile	React Native, Kotlin (Native Modules), TypeScript, Redux Toolkit (RTK Query), Offline-first SQLite, Firebase (FCM)
Frontend	React, Next.js, Redux Toolkit
Backend	NestJS, Node.js, PostgreSQL, Prisma, Redis, BullMQ, WebSocket / Socket.IO, Multi-Tenant Architecture, JWT + RBAC
AI & Voice	OpenAI (LLM / Embeddings), Deepgram (STT), ElevenLabs (TTS), Pinecone (RAG)
Payments & APIs	Razorpay, Stripe, PayPal, Coinbase, WhatsApp Cloud API, ABDM / ABHA, Google Maps SDK, AdMob
Cloud & DevOps	AWS (EC2 / S3 / CloudFront), Hostinger VPS, Docker, Nginx, GitHub Actions CI/CD, Let's Encrypt HTTPS
Testing & Tools	Jest, Detox, Postman, Android Studio, Git, Swagger

PROFESSIONAL EXPERIENCE

Edysor.ai — *Full-Stack Mobile & Backend Engineer*

Oct 2025 – Present

Udaipur, Rajasthan · Mobile apps & backend platforms across edtech, AI-voice, and recruitment products.

MOBILE — REACT NATIVE & NATIVE ANDROID

B2C CRM — Study Abroad Lead Management — *React Native + Kotlin Native Modules + Real-Time WebSocket · Preview ↗*

- Built **Kotlin Native Modules** bridged with React Native, implementing Android **Broadcast Receivers** that captured 100% of inbound/outbound calls — **5,000+ call logs collected** with zero data loss — plus **web-to-mobile click-to-call** triggered by real-time WebSocket events through a background foreground service.
- Implemented a **Truecaller-style real-time lead overlay** that matches any call to a CRM lead with live context and quick actions, and a **call-recording pipeline that has processed 2,000+ recordings** with transcripts and **NLP sentiment analysis** (emotion timeline, talk/silence ratio, action items), backed by an offline retry queue.
- Designed an **offline-first architecture** using SQLite with background sync and conflict resolution — **300+ leads created and managed** in production — with real-time team switching that invalidates team-scoped caches and re-subscribes native socket services.

GORec — AI-Powered Recruitment App — *React Native 0.85, WebSocket, RTK Query · Live on Google Play ·* ***Preview***

- Built a **real-time conversational AI app** with a WebSocket streaming pipeline (auto-reconnect, token auth) delivering live AI job/candidate cards, shortlisting, and one-tap Excel export.
- Engineered a **voice-to-job feature** using Deepgram speech-to-text to convert spoken briefs into structured search criteria (role, skills, budget, location, notice period).

BACKEND — NESTJS / NODE.JS

Interview AI — Voice Interview SaaS for Universities — *NestJS, Prisma, Redis/BullMQ, OpenAI, Pinecone, Next.js*

- Engineered a **database-per-tenant architecture** (AsyncLocalStorage tenant resolution + LRU connection pool) with fully automated provisioning and migrations — live in production with **6+ university tenants**, **300+ students onboarded**, and **70+ AI mock interviews** conducted.
- Built an end-to-end AI interview pipeline — **STT → LLM evaluation → TTS**, Azure Document Intelligence OCR for ID verification, **Pinecone RAG** over per-tenant namespaces, and automated PDF reports — processed asynchronously via idempotent, retryable BullMQ workers.
- Developed the **React / Next.js web frontend** — university admin dashboards, student onboarding and document upload, and interview reporting UI — integrated with the multi-tenant API.

Sicada AI — Voice API Platform (Public OpenAPI Layer) — *Node.js, TypeScript, REST / OpenAPI, API-Key Auth*

- Designed and built the **public OpenAPI gateway (56+ REST endpoints)** that lets third-party software run AI voice-calling campaigns programmatically — **Agents** (CRUD + test-call), **Campaigns** (create/pause/resume/cancel, recipients, statistics), **Knowledge Bases** (raw text / URL / file upload for RAG), **Phone Numbers**, **Scheduled Calls**, conversations & transcripts, provider discovery (TTS/LLM/STT), and billing/usage — actively consumed by **10+ external client integrations**.

- Built **API-key issuance, management, and per-request authentication** so partner software integrates without interactive login, securely orchestrating external voice/telephony services behind the gateway; authored a self-contained, searchable **developer API reference** with grouped endpoints and copy-ready cURL examples.

Clinic Cloud — *Independent Project (Solo Developer)* — Live in Production

goclinic.online · Live multi-tenant healthcare SaaS built end-to-end on personal time · NestJS, Prisma, PostgreSQL, Redis, React / Next.js, AWS.

- Architected a **multi-tenant healthcare SaaS** serving multiple isolated clinics across **27+ feature modules** from a single NestJS deployment — header-based tenant isolation, JWT + OTP auth, fine-grained **RBAC**, and subscription-feature gating.
- Integrated India's **ABDM/ABHA** national health-record system end-to-end: HIP bridge services, ABHA patient creation, scan-and-share consent flows, QR generation, and server-to-server callbacks.
- Built **real-time appointment booking** (Socket.IO, token-based slots, holiday/leave validation) and a multi-language **WhatsApp Cloud API bot** for bookings, reminders, payment links, and QR check-in on BullMQ queues.
- Shipped **Razorpay** subscription billing with webhooks and automated invoice PDFs to S3; scaled a Prisma layer of **80+ models / 39+ migrations** with a Redis caching layer (explicit invalidation on writes) for hot clinic, permission, and certificate data.
- Built the **React / Next.js web application** for clinic staff and admins — appointments, patient records, billing, and analytics — consuming the multi-tenant API with role-based UI gating.
- Operate Dockerized **CI/CD to AWS EC2** via GitHub Actions with Nginx, Let's Encrypt HTTPS, and zero-downtime migrations.

MetaStart via WebSenor Pvt. Ltd. — *React Native Developer (Contract)* — May 2025 – Oct 2025

- **MyFlama** · **Android** · **iOS** · **Preview (Social App · 100K+ downloads):** built a reels-style short-video feed with optimized rendering for smooth playback on mid-range devices, real-time chat, Google Maps live location tracking, AdMob ads, and Firebase push notifications.
- **EL-Pico** · **Preview (Club Automation):** developed membership management, event workflows, and a real-time booking system with **Stripe** & **Coinbase** (crypto) payments.

WebSenor Private Limited — *React Native Developer* — Sep 2024 – May 2025

- **BRPL** & **BYPL (Govt Utility Apps · 1M+ and 500K+ downloads):** maintained two of Delhi's electricity-provider apps serving millions of consumers — bug fixes, dependency/SDK upgrades, and Play Store release updates.
- **Housecaller** · **Android** · **iOS (Home Services · 10K+ downloads):** built the customer app for booking verified home-service professionals — service discovery, scheduling, and booking tracking.
- **Supraa** · **Preview (Grocery Delivery):** engineered a full checkout system with discount/GST calculation, quick-commerce ordering, geolocation-based listings, and real-time order tracking.
- **BigValue (Travel App):** built a flight booking module (one-way / round-trip / multi-city) integrating third-party travel APIs with PayPal and Razorpay.
- **Maintained production apps: Peclick** · **SoulSpace** · **Real Sampada** — ongoing fixes, compatibility updates, and store releases.

Marvik Academy for Technical Education — *MERN Stack Intern* — Jul 2024 – Aug 2024

- Developed the backend for a **Weapon Management System (Indian Army)** using the **MERN stack** for inventory, allocation, and reporting.

CORE STRENGTHS

- **End-to-end ownership** — Kotlin native modules → React Native UI → NestJS / Node APIs → PostgreSQL / Prisma → AWS.
- **Multi-tenant SaaS architecture** — shared-DB and DB-per-tenant systems with isolation, RBAC, queues, and automated provisioning.
- **Public API design** — OpenAPI surfaces, API-key management, partner integration layers, and developer documentation.
- **Real-time & offline-first systems** — WebSocket / Socket.IO and offline SQLite with background sync & conflict resolution.
- **AI & voice integrations** — OpenAI, Deepgram, ElevenLabs, and Pinecone for voice interviews, AI sourcing, and in-app assistants.
- **Proven delivery** — built and maintained 10+ production apps with **1.5M+ combined downloads** on the Google Play Store & Apple App Store, plus a live independently built SaaS.

EDUCATION

Master of Computer Applications (MCA) — Aug 2024 – May 2026

Rajasthan Technical University (RTU), Kota — Correspondence / Distance Mode (completed alongside full-time employment)

Bachelor of Computer Applications (BCA) — Aug 2021 – Jul 2024

Mohanlal Sukhadia University (MLSU), Udaipur
